

Steps for uninstalling and re-installing SASIxp dBase or SQL

Before installing a new version of the Xap Extract utility for SASIxp dBase or SQL, please use the following steps to COMPLETELY UNINSTALL the previous version:

- I. In Microsoft XP, click the START button
- II. Select "Run..."
- III. Type "Regedit" (without the quotes)
- IV. Click "OK"
- V. In the left pane of the Registry Editor window:
 1. expand HKEY_CURRENT_USER
 2. expand Software
 3. expand Xap Corporation
 4. expand Transcript Extract
 5. select the Global folder
- VI. In the right pane of the Registry Editor window:
 1. Select all listed registry entries
 2. Press the "Delete" key
 - a) Note that it will not delete the (Default) registry entry - that is good.
- VII. Close the Registry Editor
- VIII. Now you are ready to install the new version.
